

For Fuel Oil
Transfer Lines

SLEEVED POLYETHYLENE-COATED SOFT COPPER TUBING

THE ULTIMATE PROTECTION FOR FUEL OIL LINES

PRO-TEC PLUS™

Kam  TM

Extra Protection PLUS Easy Removal

Pro-Tec PLUS™ is designed to help make your installations run more smoothly and efficiently. 50' coils are now available in 3/8" OD and 1/2" OD coated copper transfer lines.

For special application fuel oil installations, there is no simpler product available. Kamco is proud to introduce *Pro-Tec PLUS™*, yet another innovative product designed from customer-driven research and development. *Pro-Tec PLUS* combines Kamco's *Oil Pro-Tec™* tubing with a black polyethylene sleeve. This now eliminates the hassle and expense of on-site sleeving in areas where factory-coated copper tubing needs additional protection. And when the tubing is buried under concrete, not only is the inner tube protected from any damage, but if necessary, *Pro-Tec PLUS* allows for quick and easy removal of the tubing without having to jackhammer the concrete. Call us toll-free at 1.800.891.0800 for more information.

THE STRENGTHS OF OIL PRO-TEC™

THE PROTECTION OF FACTORY SLEEVING

Protects environment from oil contaminants

Protects copper from corrosion

Inner grooved to assist in containment and leak detection

Continuously line marked for clearer identification

Easy to install - no additional training required

Economical

Eliminates on-site sleeving for special applications

Protects tubing from exterior physical damage (flowers beds, door thresholds and high traffic areas)

Added containment

Quick and easy removal of tubing from concrete if necessary

Time & cost savings

Customer Driven Quality.

Customer Driven Service.

Customer Driven Innovation.
