

Series 751P/752P

Manual Reset for Hot Water Boilers

The **Series 751P/752P** probe type LWCO's provide protection against low water conditions for commercial and industrial applications. These controls are fully CSD-1 compliant and are primarily used as LWCO's on hot water heating boilers and can be used as the secondary (manual reset) on steam boilers.

Features and Benefits Include:

CSD-1 Code Compliance

If the control is in a low water condition (water off probe) when there is an interruption of power, the control will remain in a low water condition when power is restored. The reset button will have to be pressed when the water level is restored to a level above the probe.

Power Interruption

If there is a loss of power, the control will automatically reset if there was water on the probe before the loss of power AND there is water on the probe when the power is restored.

Self-cleaning Probe

This is available only on McDonnell & Miller probe type controls which reduces probe maintenance to once every five years instead of annually.

Test Button

Standard on all controls to allow the control to be tested without draining the boiler or system.

'Green' Power On & 'Red' LWCO LED's

Standard on all units to give visual indication that the unit is powered up and when a low water condition is detected.

For over 85 years, McDonnell & Miller has been a name you can trust and rely on for boiler safety controls.
