

EVAPORATOR COIL REPLACEMENT GUIDE

The following guide is intended to help identify which coil should be used as a replacement based on the coil that is currently installed. This guide applies to both cased and uncased coils, as well as air handler coils.

BACKGROUND AND APPLICATION

The REPLCOILs were designed to match with a wide variety of outdoor condenser families. These coils also have enhanced corrosion protection. The REPLCOIL##HS is an Anteaater® copper tube aluminum fin coil. The REPLCOIL##M is an AnteaaterMC® Micro Channel coil.

If a braze connection part number is listed in the table in the same row as the coil being replaced, that part needs to be purchased to make sure the line-set will be able to attach to the replacement coil.

Most replacement coils come piston ready. If the coil application requires a piston, the contractor will need to open the distributor and install the correct piston (refer to the installation instructions included with the coil).

If a TXV part number is listed in the table in the same row as the coil being replaced, that part needs to be purchased to make sure the line-set will be able to attach to the replacement coil. Furthermore if there is a tube kit part in that row it will also be required along with the TXV kit.

To determine the needed replacement coil for your application you need to find your existing coil on the tables listed below and choose the corresponding coil in the same row. We recommend using like technology for your replacements however if another option is listed it is acceptable to use that coil. Charging for an unlike technology replacement will be up to the contractor based off of superheat and sub-cooling.

Selecting the Replacement Coil

To select the correct replacement coil you will need the following information

- Complete model description of indoor unit
- Outdoor condenser type (Air Conditioning only or Heat Pump)

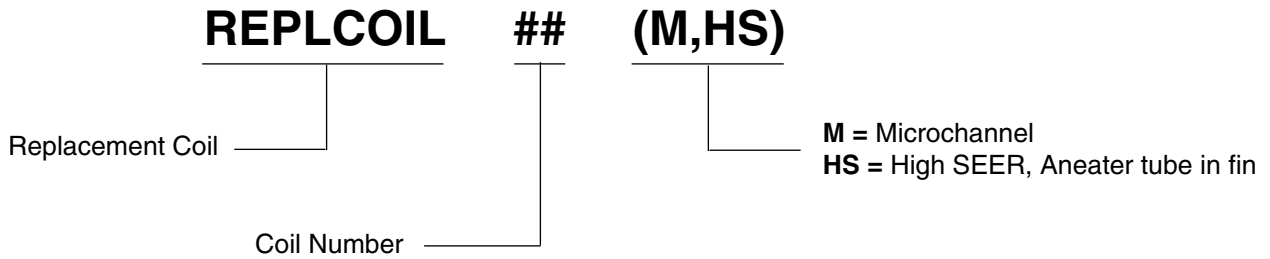

Once you have the information necessary find your indoor model description on the left side column. Once you find the correct row, slide one column to the right and select your condenser type. Continue to slide to the next column and you will have the replacement coil. In addition to the coil there may be required TXV's, tube kits, and line-set connectors that are required. If any part numbers are listed in the same row, those parts are required.
